

Steps to run the R file:

1. Download the original csv file.
2. Run the air_project file line by line till the end of eda portion.
3. Then you need to download finalDataDomestic and finalDataInternational.
4. For model Building run the same line by line. And you will get the results.
5. For deployment there is a new file by the name ui_server . You can run it in the same procedure and you will get your UI.
